

Hailstorm Crop Damage - Farmer Guidance Note (DEMO)

DEMO DOCUMENT created for the Build for Billions prototype admin-upload demo. Not an official government publication.

Immediate steps after a hailstorm

Farmers whose standing crops are damaged by hailstorm should report the damage to the Raitha Samparka Kendra or Village Accountant within 48 hours. Hailstorm is treated as a localized calamity, so damage is assessed field by field.

Insured farmers

If the crop is insured, the farmer must also intimate the insurance company within 72 hours. Note the survey number, crop name and approximate damaged area in acres when reporting.

Evidence to collect

Collect photographs showing hail marks on leaves and fruits, and photographs of the whole field. Do not harvest or clear the damaged crop until officials have inspected it.

Horticulture crops

For fruit orchards and vegetables damaged by hail, the Horticulture Department officer participates in the joint survey. Perennial crops are assessed separately from annual crops.

Helpline

Contact your local Raitha Samparka Kendra for assistance with the relief application and survey dates.
